

Detect Airborne Biological Matter like Coronavirus

AirAnswers® is the only commercially available air sampling device that collects all biological particles including viruses such as coronavirus, bacteria, allergens, and molds down to 0.1 microns.

AirAnswers® monitors for the invisible ultra-fine allergens and mold particles that can cause potentially harmful health effects.

Our revolutionary technology has the capability to monitor a multitude of public spaces for the presence of airborne SARS-CoV-2 and verifies current protocols such as ventilation, disinfection, cleaning, air purification and filtration.

AirAnswers® should be used for routine air monitoring wherever people gather and is especially critical for populations who have underlying medical conditions.

Our samples are analyzed in our ISO certified laboratory by RT-PCR using protocols designed and provided by the Center for Disease Control and Prevention.
